

## Warwick Resources

Just 50km east of Newman, the Jimblebar gold project is quickly becoming the main focus in Warwick Resources Ltd's portfolio of assets around the Sylvania Inlier in Western Australia's Pilbara region.

The project has been subject to three drilling campaigns in 2007 with success in each.

The Jimblebar area produced more than 3,500oz in the 1930s from shallow workings, which were restricted to the oxidation zone. But the company has proven through preliminary metallurgical testwork that further ore would be easily winnable.

The company announced the results of its

first RC drilling programme in June, including a hit of 1m @ 160 g/t gold within 8m @ 22.3 g/t from 34m depth in drill hole **WRKRC6**.

"We are looking at which projects are likely to generate early cashflow and the gold project has that potential because it is shallow and has some high-grade shoots in it."

The shallow, high-grade nature of Jimblebar could see it develop more rapidly than that of the company's other main asset, the Copper Range copper project, also in the Pilbara.

The company has a suite of grassroots projects in the region as well as an inferred nickel laterite resource at Waite Kauri, 21km

north of Murrin Murrin which it may look to divest in the future.
